

# Rattee and Kett

## Kett Codestone

Rattee and Kett are famous for the quality of their conservation work, a quality which extends to new building projects from warehouses to hospitals. Specialised units deal with particular areas and the Codestone Department has developed expert skills in the manufacture of artificial stone for architectural use, the replacement of carvings and mouldings, *in situ* repairs to masonry, and the reproduction of decorative features and sculptures.

### CODESTONE FOR NEW BUILDINGS

Natural Stone is one of the best-loved of building materials, and where circumstances allow would almost certainly be the first choice. When, however, a less expensive alternative is required, the use of moulds to produce multiple casts in artificial stone can be the answer. Kett Codestone offers a range of finishes including those of many of the traditional English stones and a number of different

materials from the competitively priced artificial stone to more specialised resin-based compounds. Copings, cills and lintels are frequently specified in cast stone, but used with imagination it can enhance a building's appearance in a number of ways. Consultation at the design stage will ensure that full value for money is obtained.
